Darfon Bluetooth Driver For Mac

Does the Darfon Bluetooth keyboard work with Windows XP? By Aug 4, 2006 - 11:20 AM CST ••• While researching the that is now offered on their website for the eo I noticed that it looks just like the for the Blackberry.. Further investigation revealed that the Shasta is manufactured and sold The Darfon web page shows it supports Windows Mobile and Palm devices but doesn't mention Windows XP at all, which it needs to support for UMPCs.. It would be a driver issue and in fact some Bluetooth keyboards like the ThinkOutside Stowaway Bluetooth require no additional drivers to run under WinXP so if that's the case then the Darfon, ThinkOutside Shasta, and the TabletKiosk versions would all work on any Windows XP device, including UMPCs and the Sony UX.
